# Occupational medicine in DK

## History part I

### *Before 1980'ies*

- A lot of doctors working as company doctors
- Often part time
- Many trained in general practice, occupational medicine not a formal medical speciality
- Some doctors biased toward employers' interests

# Occupational medicine in DK

## History part II

### From 1980'ties – overall:

- Each workplace obliged to engage with an OHS unit to prevent occ. diseases and accidents
- Three models
  - A “center” model (e.g. in a region og larger city, to facilitate proximity and availability)
  - An “industry” model (focus on relevant OHS issues, e.g. specific chemicals or processes)
  - A company model (for larger companies wanting a more tailored service)

### - Consequences

- Cross professional, “the patient is the workplace not the worker” -> doctors marginalized
- OM developed at hospitals with focus on patient’s disease aetiology and epidemiology
- OM at the work places devaluated and degenerated – except in a few bigger industries
- Not many full time occupational physicians outside the hospital clinics

**IN 2001 OHS BECAME TOTALLY DEREGULATED...**

# Other countries?

- E.g. Finland and Sweden still OM close to the enterprises. More or less regulated by law.
- Other countries like US, Canada, ...: OM outside hospitals is an industry running

# OM moved to the hospital clinics - *Good or bad?*

	Strengths	Weaknesses
OM from the hospital	<ul style="list-style-type: none"><li>• Backed up by the "big" hospital in aetiology</li><li>• A huge research muscle</li><li>• "Independent" of the work place interests</li></ul>	<ul style="list-style-type: none"><li>• Separated from the workplaces</li><li>• Introverted and self sufficient</li><li>• Focus on disease causes at the expense of the patients future needs</li></ul>
OM based on the workplaces	<ul style="list-style-type: none"><li>• Focus on <u>real needs</u> and solutions more than problems and causes</li><li>• Not too wrapped in the evidence dogmas and public bureaucracy</li></ul>	<ul style="list-style-type: none"><li>• Depleted connections to the academic world</li><li>• Too focussed on unjustified health checks</li></ul>

## Real needs — Four “Theses”\*)

<p>1</p> <p>OM is not just about the “old” occupational diseases. OM should be holistic, covering “all” work related factors of importance for the persons health and workability</p>	<p>2</p> <p>OM not just about the statistical evidence but also about the evidence extracted from the narrative of the patient in front of you</p>
<p>3</p> <p>OM is not just about causes but also about helping the patient in his future work and life</p>	<p>4</p> <p>OM is not just about the patient but also about his colleagues, the working environment and how OHS can be well understood and internalized in the business</p>

\*) Larsen et al: Praktisk arbejdsmedicin, 2013

*So: OH&S is balanced and constitutes a  
"whole"*

A safe and healthy  
working environment

"Return to work",  
Vocational rehab

Health promotion

# Prevention of work related musculoskeletal disorders = “BEAT”

$$\text{Health} = \frac{\text{Roboustness}}{\text{Exposures}} =$$

## Real needs — Four “Theses”

<p>1</p> <p>OM is not just about the “old” occupational diseases. OM should be holistic, covering “all” work related factors of importance for the persons health and workability</p>	<p>2</p> <p>OM not just about the statistical evidence but also about the evidence extracted from the narrative of the patient in front of you</p>
<p>3</p> <p>OM is not just about causes but also about helping the patient in his future work and life</p>	<p>4</p> <p>OM is not just about the patient but also about his colleagues, the working environment and how OHS can be well understood and internalized in the business</p>

# Occupational Medicine in the future

- Future OM must respond to all Four Theses
- It's not just about finding aetiological factors looking back in the patients history etc.
- A well run OM reaching out to the workplaces is fundamental for OM in the future
